Our Philosophy

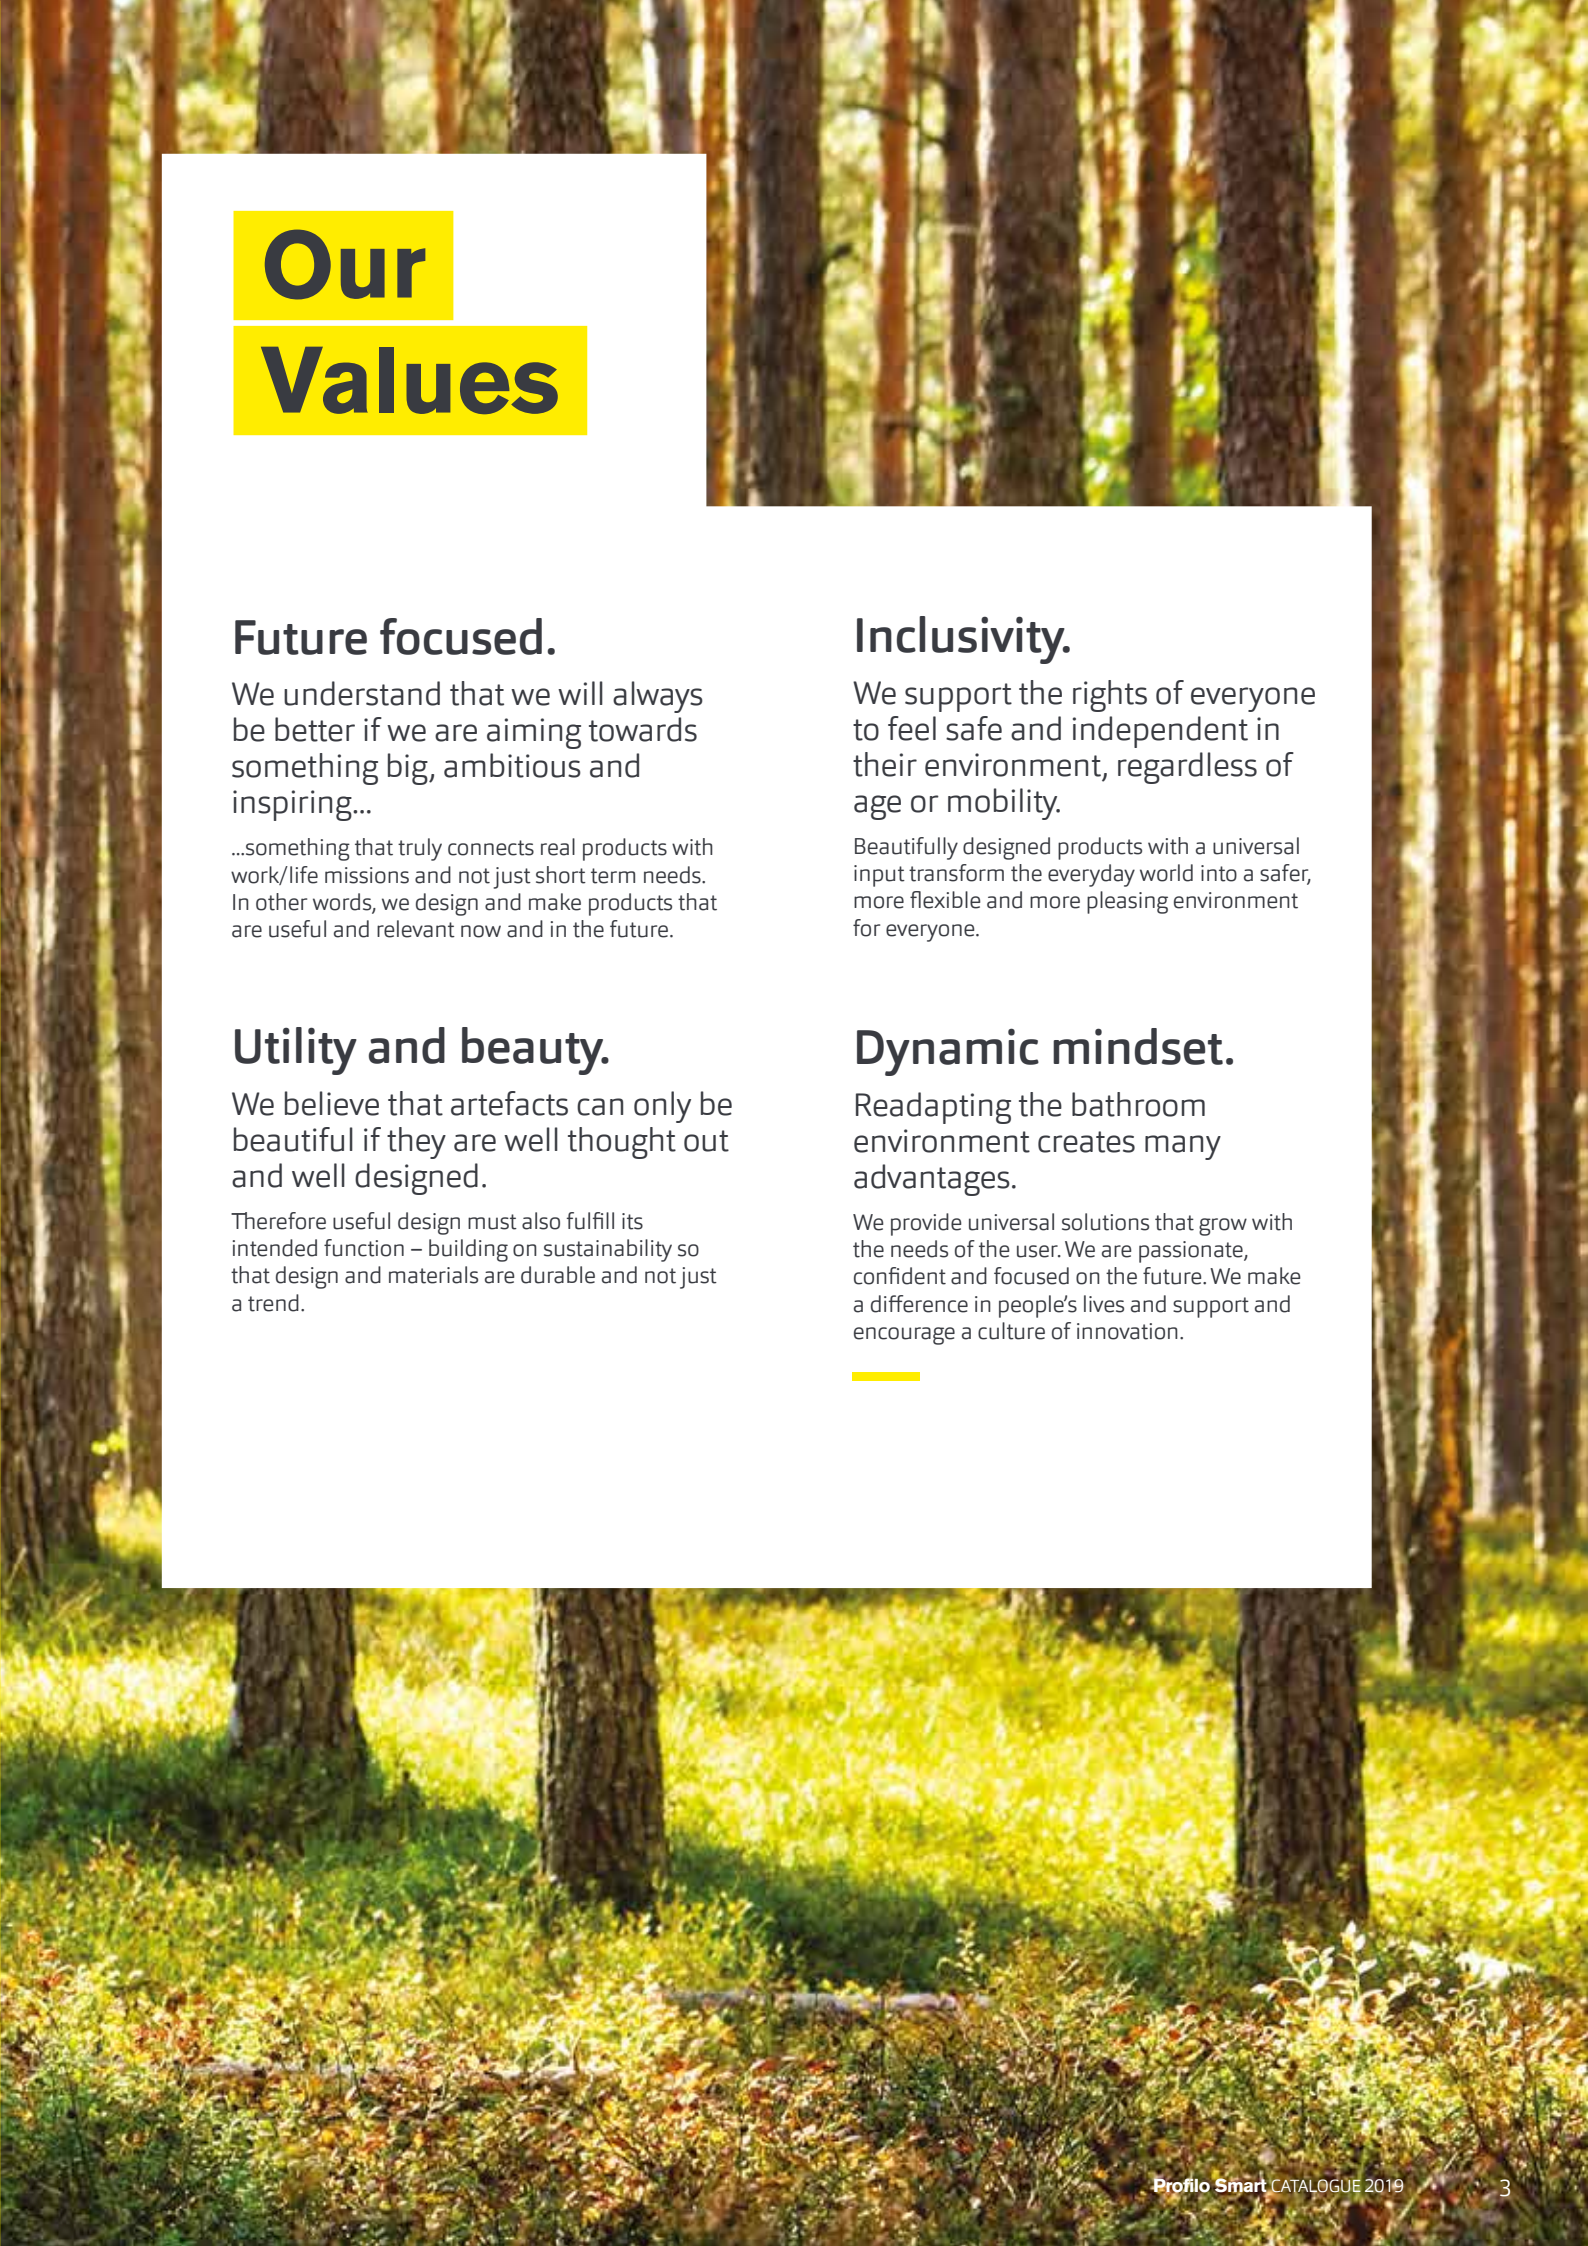
The environment has to adapt to people's needs.

People with reduced mobility are all too well aware of the difficulties related to adapting to the environment. Starting with these considerations, we design and manufacture universal solution products pursuing a simple fundamental belief: it is the environment that has to adapt to people and not the other way around.

Beauty matters.

We believe that beauty and elegance create comfort.

Whether we look at healthcare facilities, hotels or private residences, beauty shouldn't be considered a minor factor only because we are dealing with functional needs.
We believe that beauty matters and helps people to be serene. That's why our products are designed to mix smooth functionality with spotless elegance.



Our Values

Future focused.

We understand that we will always be better if we are aiming towards something big, ambitious and inspiring...

...something that truly connects real products with work/life missions and not just short term needs. In other words, we design and make products that are useful and relevant now and in the future.

Inclusivity.

We support the rights of everyone to feel safe and independent in their environment, regardless of age or mobility.

Beautifully designed products with a universal input transform the everyday world into a safer, more flexible and more pleasing environment for everyone.

Utility and beauty.

We believe that artefacts can only be beautiful if they are well thought out and well designed.

Therefore useful design must also fulfill its intended function – building on sustainability so that design and materials are durable and not just a trend.

Dynamic mindset.

Readapting the bathroom environment creates many advantages.

We provide universal solutions that grow with the needs of the user. We are passionate, confident and focused on the future. We make a difference in people's lives and support and encourage a culture of innovation.

The smart system designed to make the bathroom environment flexible.

The core of Profilo Smart is our track and cover system. This simple, clever & universal solution affords flexibility throughout the bathroom.

Our track is an aluminium profile upon which you can attach, move, adjust and easily remove bathroom accessories.

Our unique system, has been built around 3 main features

01. It is flexible.

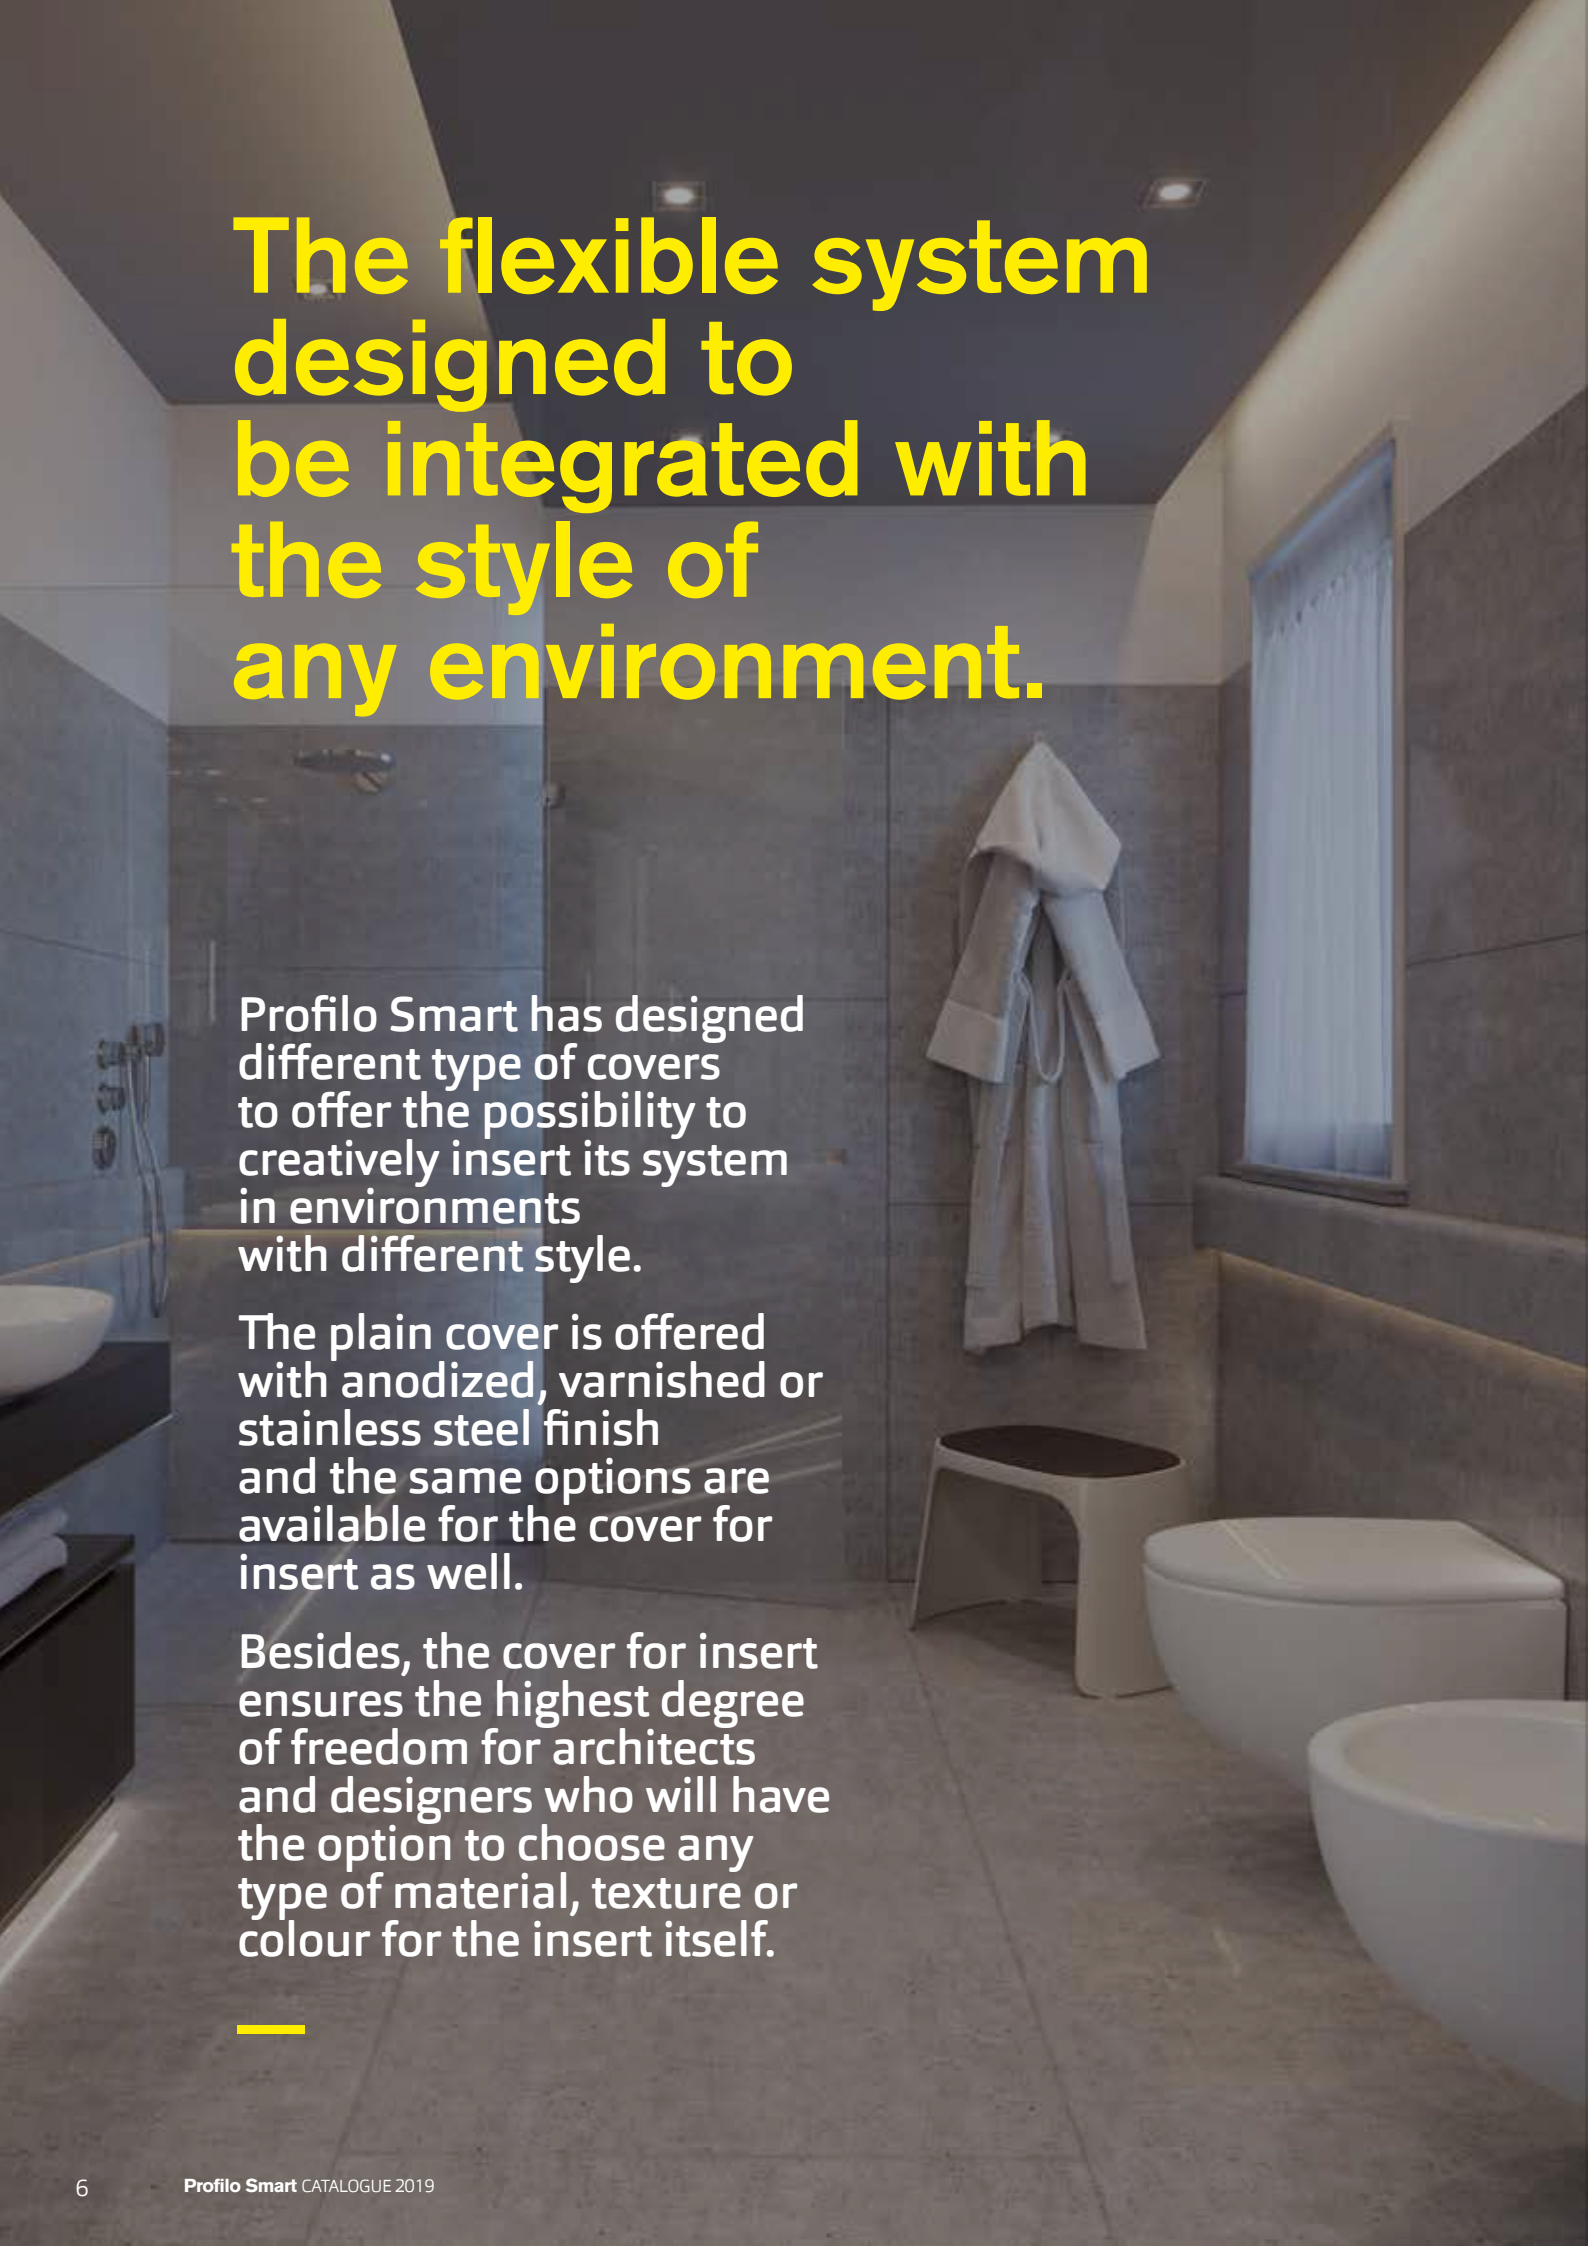
Our accessories are easy to move and adjust: they adapt to the user's needs, allowing him or her to experience a superior level of comfort and autonomy.

02. It is modular.

Our products can be added or removed from the track within minutes, leaving the bathroom ready to adapt to different users, situations and needs.

03. It is customizable.

Our range of covers for the horizontal track have been designed to match every possible style of bathrooms. It is possible to choose from an endless number of colours, using inserts of every possible material and even using coatings to hide the track and completely merge it into the environment's aesthetics.



The flexible system designed to be integrated with the style of any environment.

Profilo Smart has designed different type of covers to offer the possibility to creatively insert its system in environments with different style.

The plain cover is offered with anodized, varnished or stainless steel finish and the same options are available for the cover for insert as well.

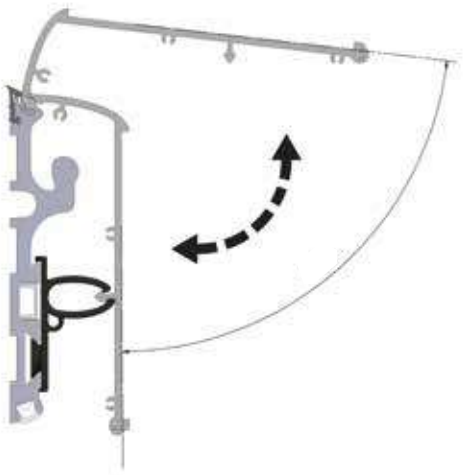
Besides, the cover for insert ensures the highest degree of freedom for architects and designers who will have the option to choose any type of material, texture or colour for the insert itself.

Cover for insert

01

Designed to be integrated.

- The possibility to add the insert allows you to match the system with colours and materials of any bathroom.
- It is possible to use any type of material for the insert or choose the highly customisable in-house option.
- It is possible to transfer on the insert any possible texture and reproduce the one on the wall.



02

Easy to clean.

03

Hides and protect.

- Hides the mechanism underneath and protects it from water.
- The Profilo Smart insert has been designed to pair with the related cover, in order to hide the system while matching the colour and style of bathroom environment.

04

Fully custom.

- The cover for insert is offered with with an anodized, varnished or stainless steel finish.
- The Profilo Smart inset can be customised with any colour or texture of choice.

Accessible Tourism

A partnership of excellence.

Village for all®, an innovative tourism company with 11 years of experience and an International network, has recognized a number of our products as guaranteed to provide Accessible Hospitality, without compromising on design, ensuring the guests needs are put first.

A growing market.

Accessible Tourism does not refer only to people with disabilities but also the elderly.

As the older population continues to grow at an unprecedented rate, embracing comfort solutions for people with reduced mobility is the wise choice for the long term.
Accessible tourism is not only about disabled individuals but mostly about the elderly.
Almost 20% of Europen Tourists are over 65 and this figure is continuing to rise. As a result, it is imperative that their needs are addressed and met as the demand for accessible accommodation increases.

De-seasonalised demand.

Elderly people and people with reduced mobility usually prefer to travel off season in order to avoid crowds.

The availability of more accessible rooms increases the likelihood of having more guests in every season.

A better customer relationship.

Being able to address the different needs of our customers is what improves our credibility.

Better word of mouth and better "sentiment" on social media. Sensitive social issue such as accessibility usually has a stronger echo.

An improved offer.

Improving the level of accessibility on offer allows you to include new target groups.

Accessibility is not only a mandatory requirement, but it is also a social issue and a market opportunity.

The gap between market value and market potential.

Studies show that the market potential of Accesible Tourism is far bigger than its actual market value and this is true mainly because of 2 barriers: insufficient infrastructure and the information barrier (the elderly and people with reduced mobility are not acknowledged as a key market group by the industry).

What if we could remove these barriers?

Removing Barriers

Profilo Smart allows hotel businesses to remove the biggest obstacle, insufficient infrastructure, giving them the opportunity to identify and accommodate this key market group of seniors and people with reduced mobility.

Versatile bathrooms.

Would you like to turn an accessible bathroom into a standard one within seconds and without the use of tools?

Each of our accessories is easily removable, which means that a bathroom equipped with our flexible system may be switched from standard to accessible within minutes. It is possible to drastically increase the number of accessible rooms without compromising the number of standards ones.

New tailored offers for different groups of individuals.

With Profilo Smart it is possible to offer a better service in terms of comfort and safety in the bathroom and attract new groups of individuals, tailoring specific offers for the elderly and for people with reduced mobility.

Both groups have particular habits and needs, therefore they prefer travelling off-season. Adopting the Profilo Smart system and acknowledging these individuals as sensitive market groups, will allow you to seize the real potential of Accessible Tourism.

In well-designed buildings, people smile more.

Problems with accessible bathrooms.

Poor design
With accessible bathrooms, architects are normally forced to sacrifice design for functionality.
The result is an aesthetically poor environment.

Disjointed design
Rarely is the design of accessible bathrooms coherent with the overall quality and design standard of the hotel.

Discrimination against people with disabilities
People with reduced mobility can't enjoy the same design quality as other guests.

Damage to the Hotel's image
In case of overbooking, regular customers will be allocated to accessible rooms with poor design.
They will be paying the same price for less value.

More is less
Increasing the number of accessible rooms means decreasing the number of regular ones.

Why choose Profilo Smart?

A careful and sophisticated design
Our smart flexible system combines superior functionality with an elegant design.

Endless options for customization
Thanks to our wide range of customization options, it is possible to match to the hotels style and decor.

Design for all
Elderly guests and people with disabilities can expect the same design quality as the other guests.

The smart choice
In case of overbooking, aids can be quickly and easily removed transforming an accessible bathroom into an equally elegant standard one.
Moreover, the choice is also creating comfort rooms maximizing the guest experience.

More is better
Equipping a number of rooms with the horizontal Track & Cover, allows you to increase the number of standard room as well as the number of accessible ones.

Smart Choice

Profilo Smart's flexible system is designed to hide its mechanism and to adapt to any bathroom's style.

An elegant and customisable aluminium cover hides and protects an engineered wall mounted track where many different accessories can be easily added.

The endless customisation of the three different covers, allows the entire system to be blended harmoniously with the design of the bathroom.

Anyone can easily add and remove bathroom accessories from the track within a minute without the use of any tool.

Many accessories are designed to be height adjustable offering maximum comfort to every user.

It is possible to move the accessories sideways, accommodating different needs as they arise.

"It is a known fact that an accessible built environment is a crucial requirement for round 10% of the population, a necessity for approx. 30 to 40% and comfortable for 100%"*.

*Documentation n.526 Economic Impulses of Accessible Tourism for All; Federal Ministry of Economics and Technologies, Germany.

A new level of attention for guests with reduced mobility

A flexible system.

Our flexible system is designed with a universal input allowing you to address the individual needs of guests with reduced mobility to an unprecedented level.
A wide range of height and sideways adjustable accessories will help your guest to be more independent.
They will feel at home. And they will come back.

An accessible bathroom. Only when you need it.

Each of our accessories is easily removable, which means that a bathroom equipped with our flexible system may be switched from regular to accessible within minutes.

Match your style

Limitless customisation of colours and materials.

We can ensure that our system will match the style of your hotel.
A common problem with accessible bathrooms is that architects usually have to choose between beauty or functionality.
Profilo Smart allows you to avoid compromise: the results are better functionality and flawless design.
Our cover is available in 3 different types and in an endless range of colours and materials.

Accessible bathrooms: a market opportunity.

The Profilo Smart flexible system is a unique tool with the ability to transform a financial liability such as mandatory requirements for accessible rooms, into a great market opportunity.

Improve

Caring about people with reduced mobility means being socially responsible and improving the company image.

New market

Including new market groups means growing the customer base.

Ready for the future

Increasing the number of accessible rooms means acknowledging trends and getting ready for the future.

Guests

Efficient guests allocation means never turn down a guest again.

Hi-quality

Hi-quality products means long lasting investment (5 years guarantee).

Profilo Smart for Residential Market.

The standard feature for any project.

Profilo Smart stands where accessibility meets design.

Our design is extremely discreet and it can be hidden in plain sight: offering Profilo Smart as a standard feature in residential projects means offering a superior service without compromising the bathroom style.

In fact, Profilo Smart does not distinguish an environment as an accessible one, meaning it is possible to create future-proof bathrooms in any project, not just those specifically designed for older people.

Future Proof Solutions.

Choosing Profilo Smart means preparing for the changing needs of the residents over time.

It also alleviates the need for changes should the house be bought by new residents with reduced mobility.

All these changes may affect habits and needs, but thanks to Profilo Smart, they won't impact the building's structural integrity.

Once the track is installed, bathroom aids can be quickly and easily attached and removed as required without the use of tooling.

The cover will protect and hide the horizontal track integrating into the bathroom design.

Preparing to face the ageing process.

Equipping a private residence with Profilo Smart's flexible system means preparing for facing the challenges of the ageing process.

Ageing inevitably leads to the reduction of one's mobility and a flexible system allows the user to address different needs as they arise.
Thanks to the elegance of our special cover for coating, it is possible to blend the system into the environment's design and hide it completely.
Profilo Smart is not distinguishable as accessible, which means that it is possible to equip a bathroom only with the track without compromising the design of the bathroom: it will be possible to add the bathroom aids when needed and without further installation.

Enhances resident's independence.

Profilo Smart offers a different approach to accessible solutions for private residences.

This solution is comprised of superior functionality and a unique, highly customizable design.
Our range of flexible products can be adjusted to perfectly suit the needs of anyone.
Adopting our flexible solution will guarantee the highest standards of comfort and safety for the users which will contribute to enhancing the resident's independence.

PRODUCT FEATURES

Flexibility

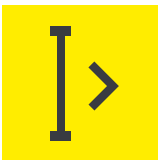
Profilo Smart's flexible system addresses and solves several different problems associated with accessible rooms.

Addressing individual needs usually means sacrificing the style of an environment. Profilo Smart's flexible system combines elegant design with superior functionality.

Our products can be:

Height and sideways adjustable

These products are designed to be attached on the horizontal track as well as on a vertical track, allowing them to be adjusted both horizontally and vertically. These features create the ideal solution for environments that will be used by a variety of different users who will have individual requirements.



Removable

The wide range of products designed for the horizontal track can be easily removed when not in use. This feature brings great versatility to the environment allowing the bathroom to completely adapt to different needs.

Sideways adjustable

Many of our products are designed to be moved horizontally along the track, facilitating a versatile environment.

Smart Environment

A flexible environment is a smart one:

It is versatile and can be adapted depending on the individual needs of each user. In addressing these needs, we created a system that balances the effects of reduced mobility, thanks to the ability to move accessories in different directions.

Easily removable

Products are easy to attach onto the horizontal track without any tools.

Easy horizontal adjustment without any tools.

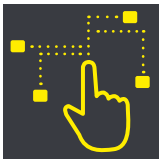
Easy vertical adjustment without any tools.

Products can be easily removed within seconds without any tools.

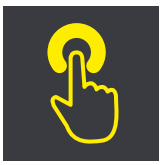
Flexibility at glance

Adapt the bathroom environment according to the user's needs.

Add, change or remove the bathroom accessories easily, at anytime.



Place the bathroom accessories anywhere on the track without any tools.



Choose between a wide range of accessories and finishing.

Hi-quality materials

- Aluminium 6060 T6 / 6063 T6
- Anodization 10 / 15 micron
- Diecasting aluminium
- Inox stainless steel 304
- Antibacterial soft material
- Plastic material (ABS, PA6 30% GF, POM)
- Plastic surface treatments (metallizing, soft touch varnishing)

Our Product Lines

Smart.

Flexibility is the single most defining feature of Profilo Smart and its unique system. This is why we have included every flexible product in the SMART line. Whether one of our products is height or sideways adjustable, it is SMART.

Classic.

We designed a range of wall mounted, fixed products, with superior quality and elegant, timeless design. We call this product line CLASSIC.

Accessories.

This category includes all accessories not purposely designed for the track.

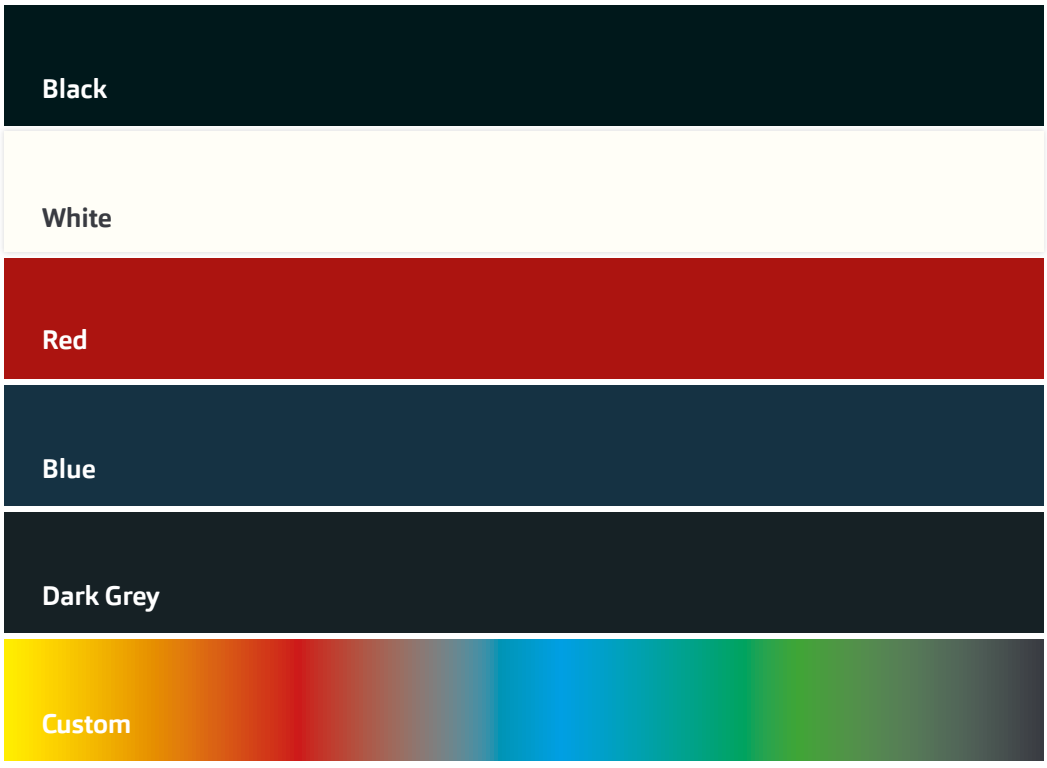
Colours and finishes

Profilo Smart's flexibility is not only about function. It is also about aesthetics.

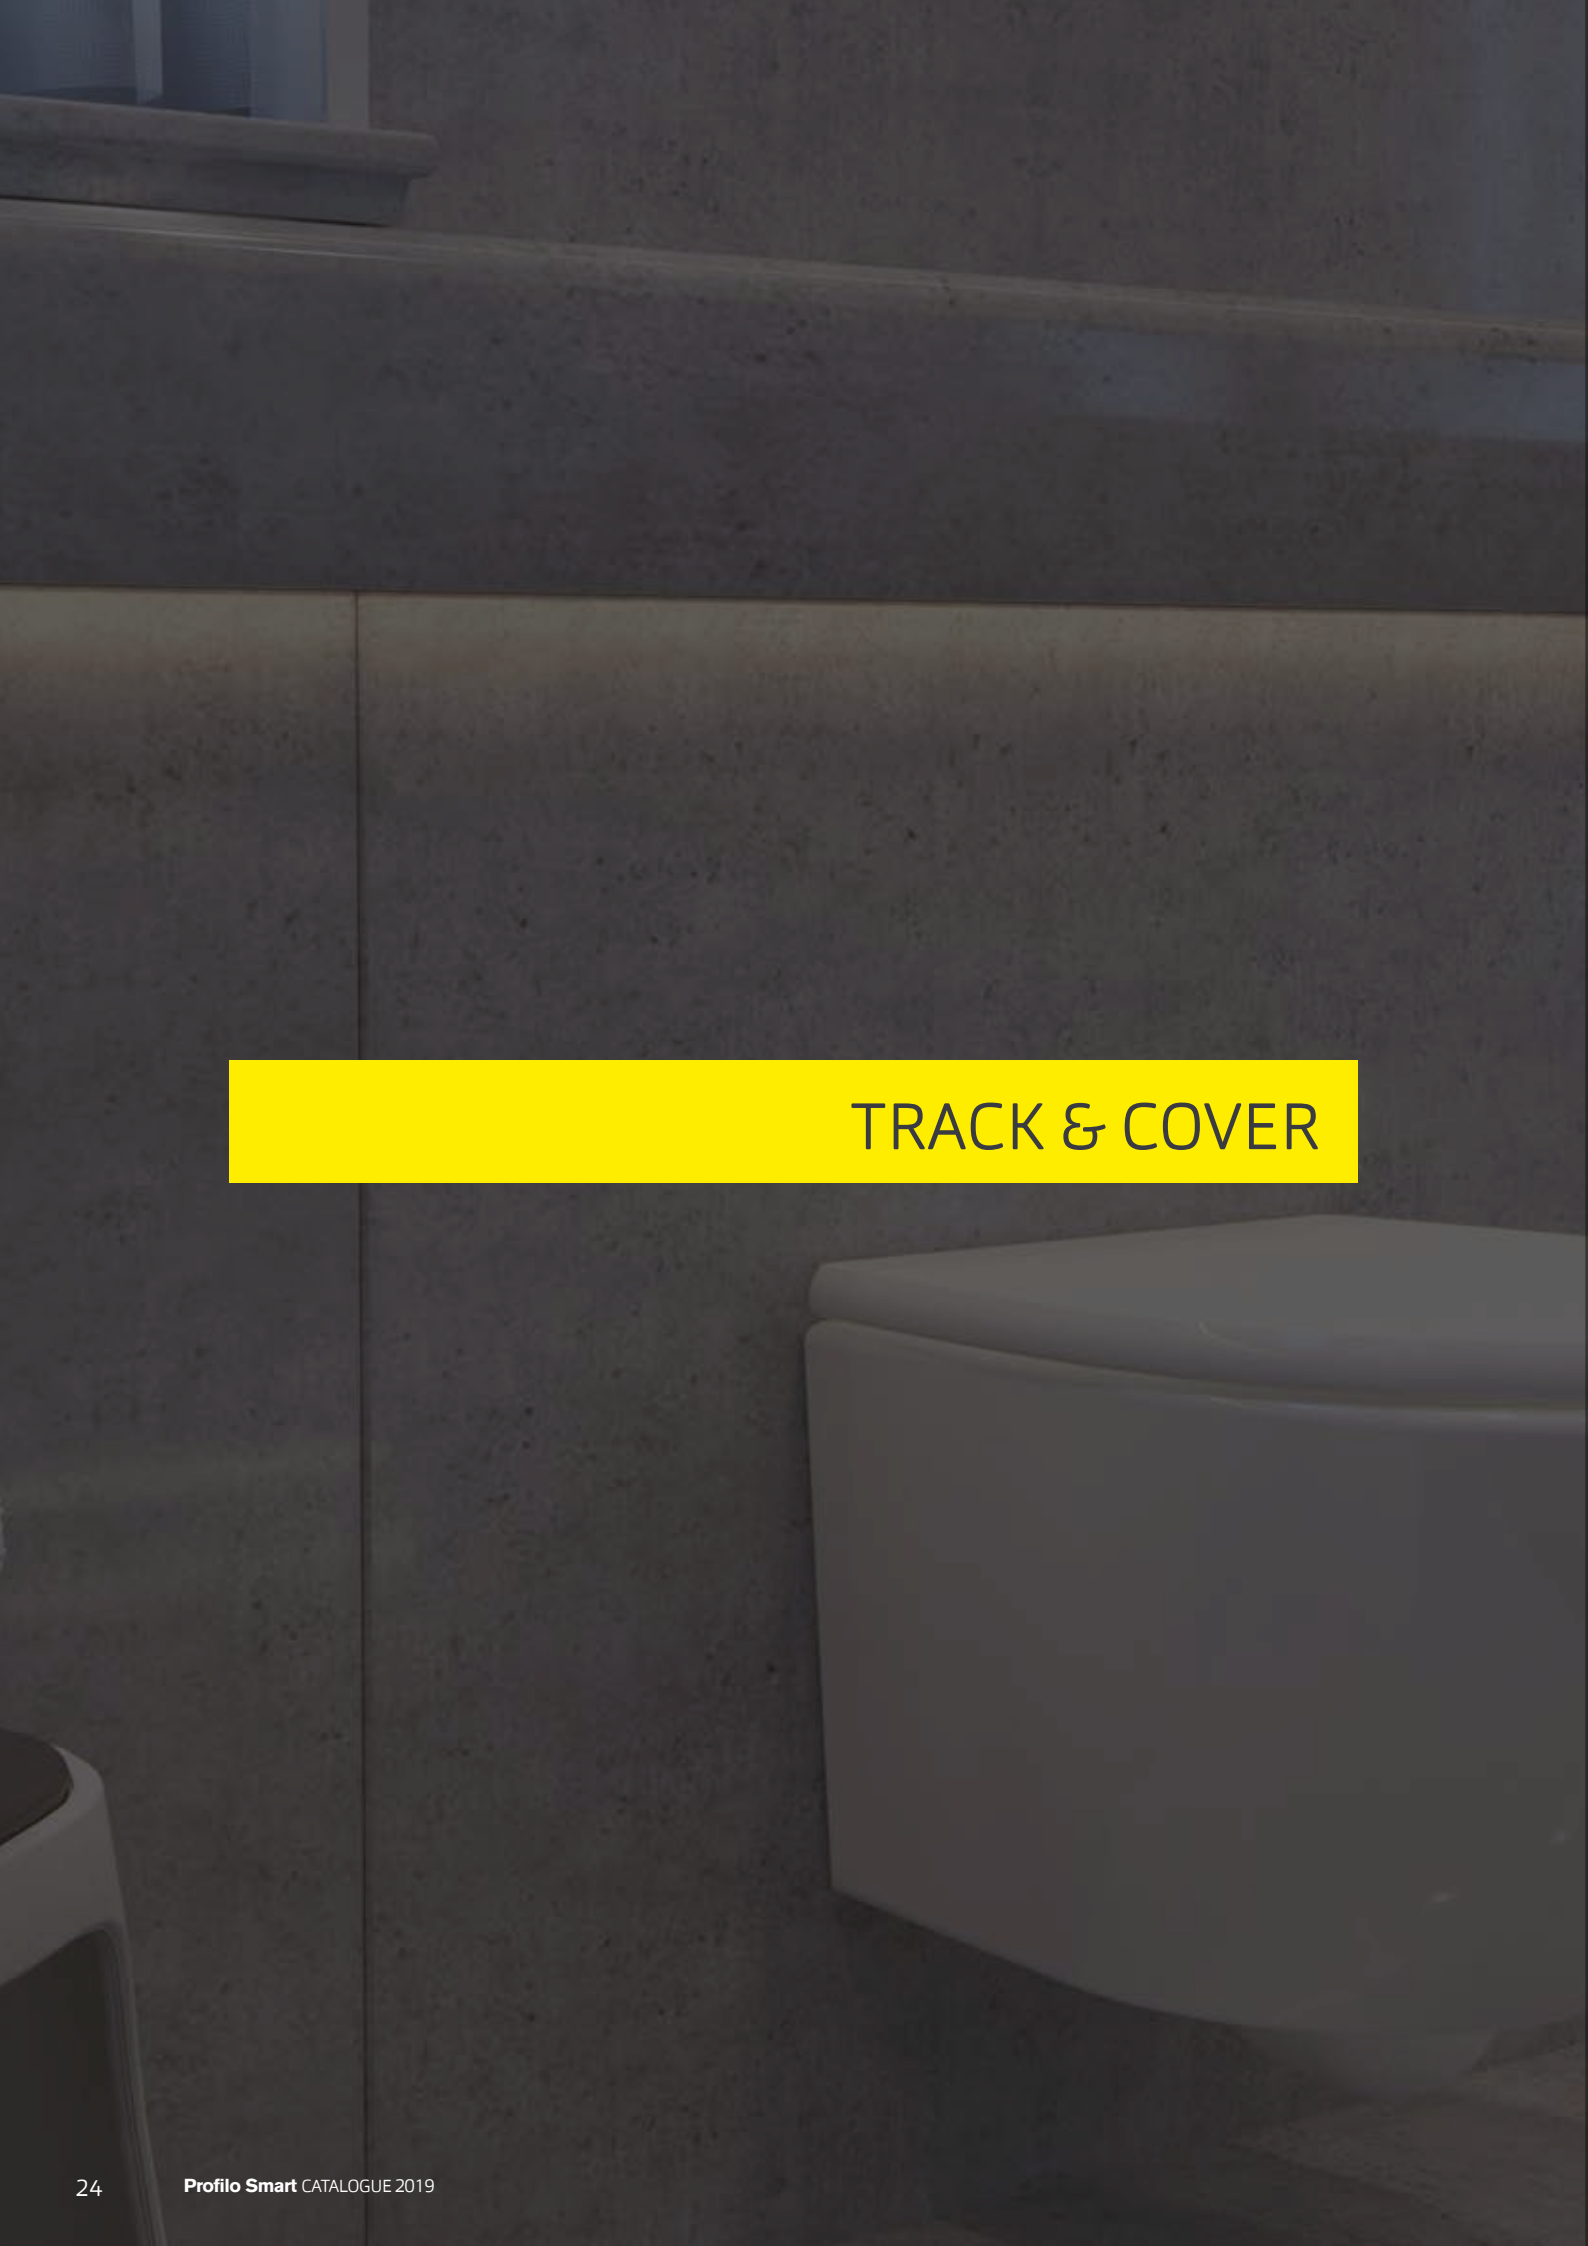
Architects can enjoy the adaptability of our design. For the plastic components of our main products, we offer a range of 5 standard colours and the option to request a customised one (the minimum quantity order for customised colours is 100 pieces).
Additionally, it is also possible to choose between 2 aluminium finishes: anodized or similar stainless steel.

Aluminium surfaces are available with two finishes:

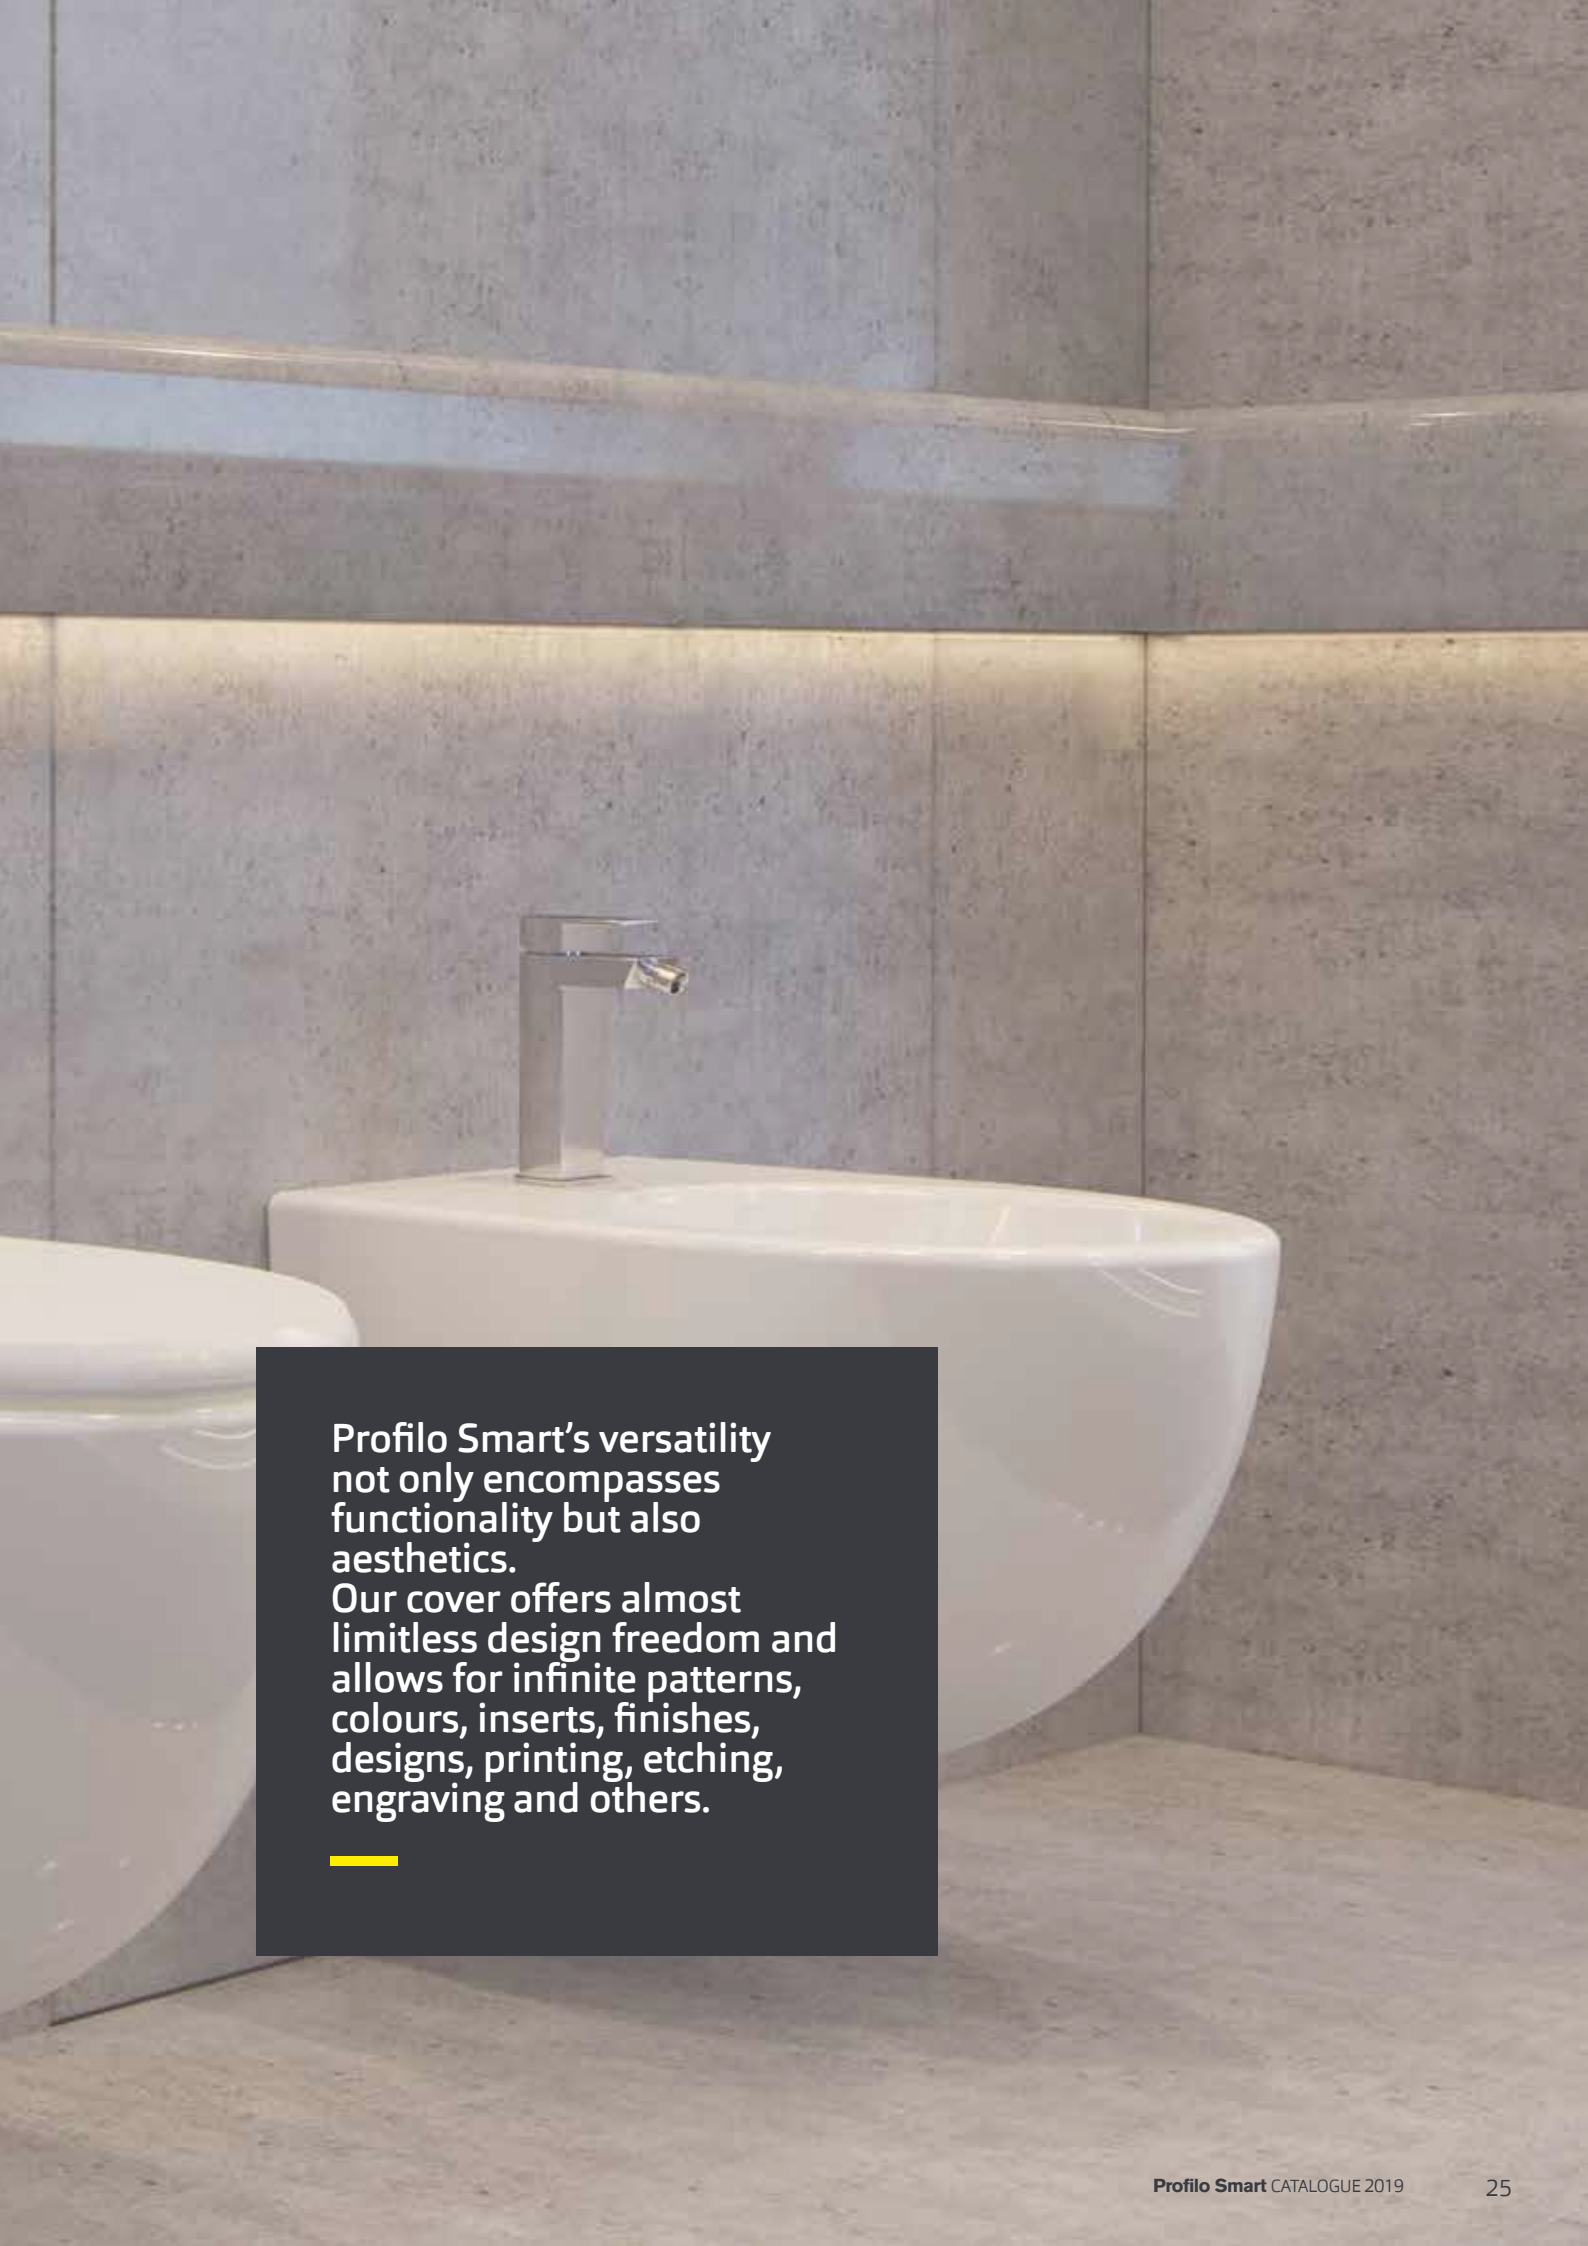
Plastic surfaces are available in five standard colours:



OUR PRODUCTS



TRACK & COVER



Profilo Smart's versatility not only encompasses functionality but also aesthetics.
Our cover offers almost limitless design freedom and allows for infinite patterns, colours, inserts, finishes, designs, printing, etching, engraving and others.

Track & Cover

Profilo Smart's Track & Cover is what makes our system flexible. It enables the bathroom environment to adapt to anyone's need and offers an unprecedented level of comfort and safety.

The track has been designed to support a LED system and to allocate electricity cables in two different cable ducts (internal and external). Moreover, in order to make the alignment of the two sections of the track easier, we designed a cavity in which installers can insert a special guide-bar to make the operation quicker.

N.B. The maximum theoretical length for the track supply is 600 cm (please verify your shipping options), but in order to lower the shipping costs, we cut in half pieces longer than 230 cm. To ensure the proper functioning of the cover, we do not supply cover segments that are longer than 120 cm. If the track is divided by 2, the cover will be divided by 3 pcs, in this way the intersection between the 2 pcs. of track will remain covered.

E.g. If you order 300 cm of track and cover, you will receive 2 pcs. of track (150 cm) and 3 pcs. of cover segment (100 cm each).

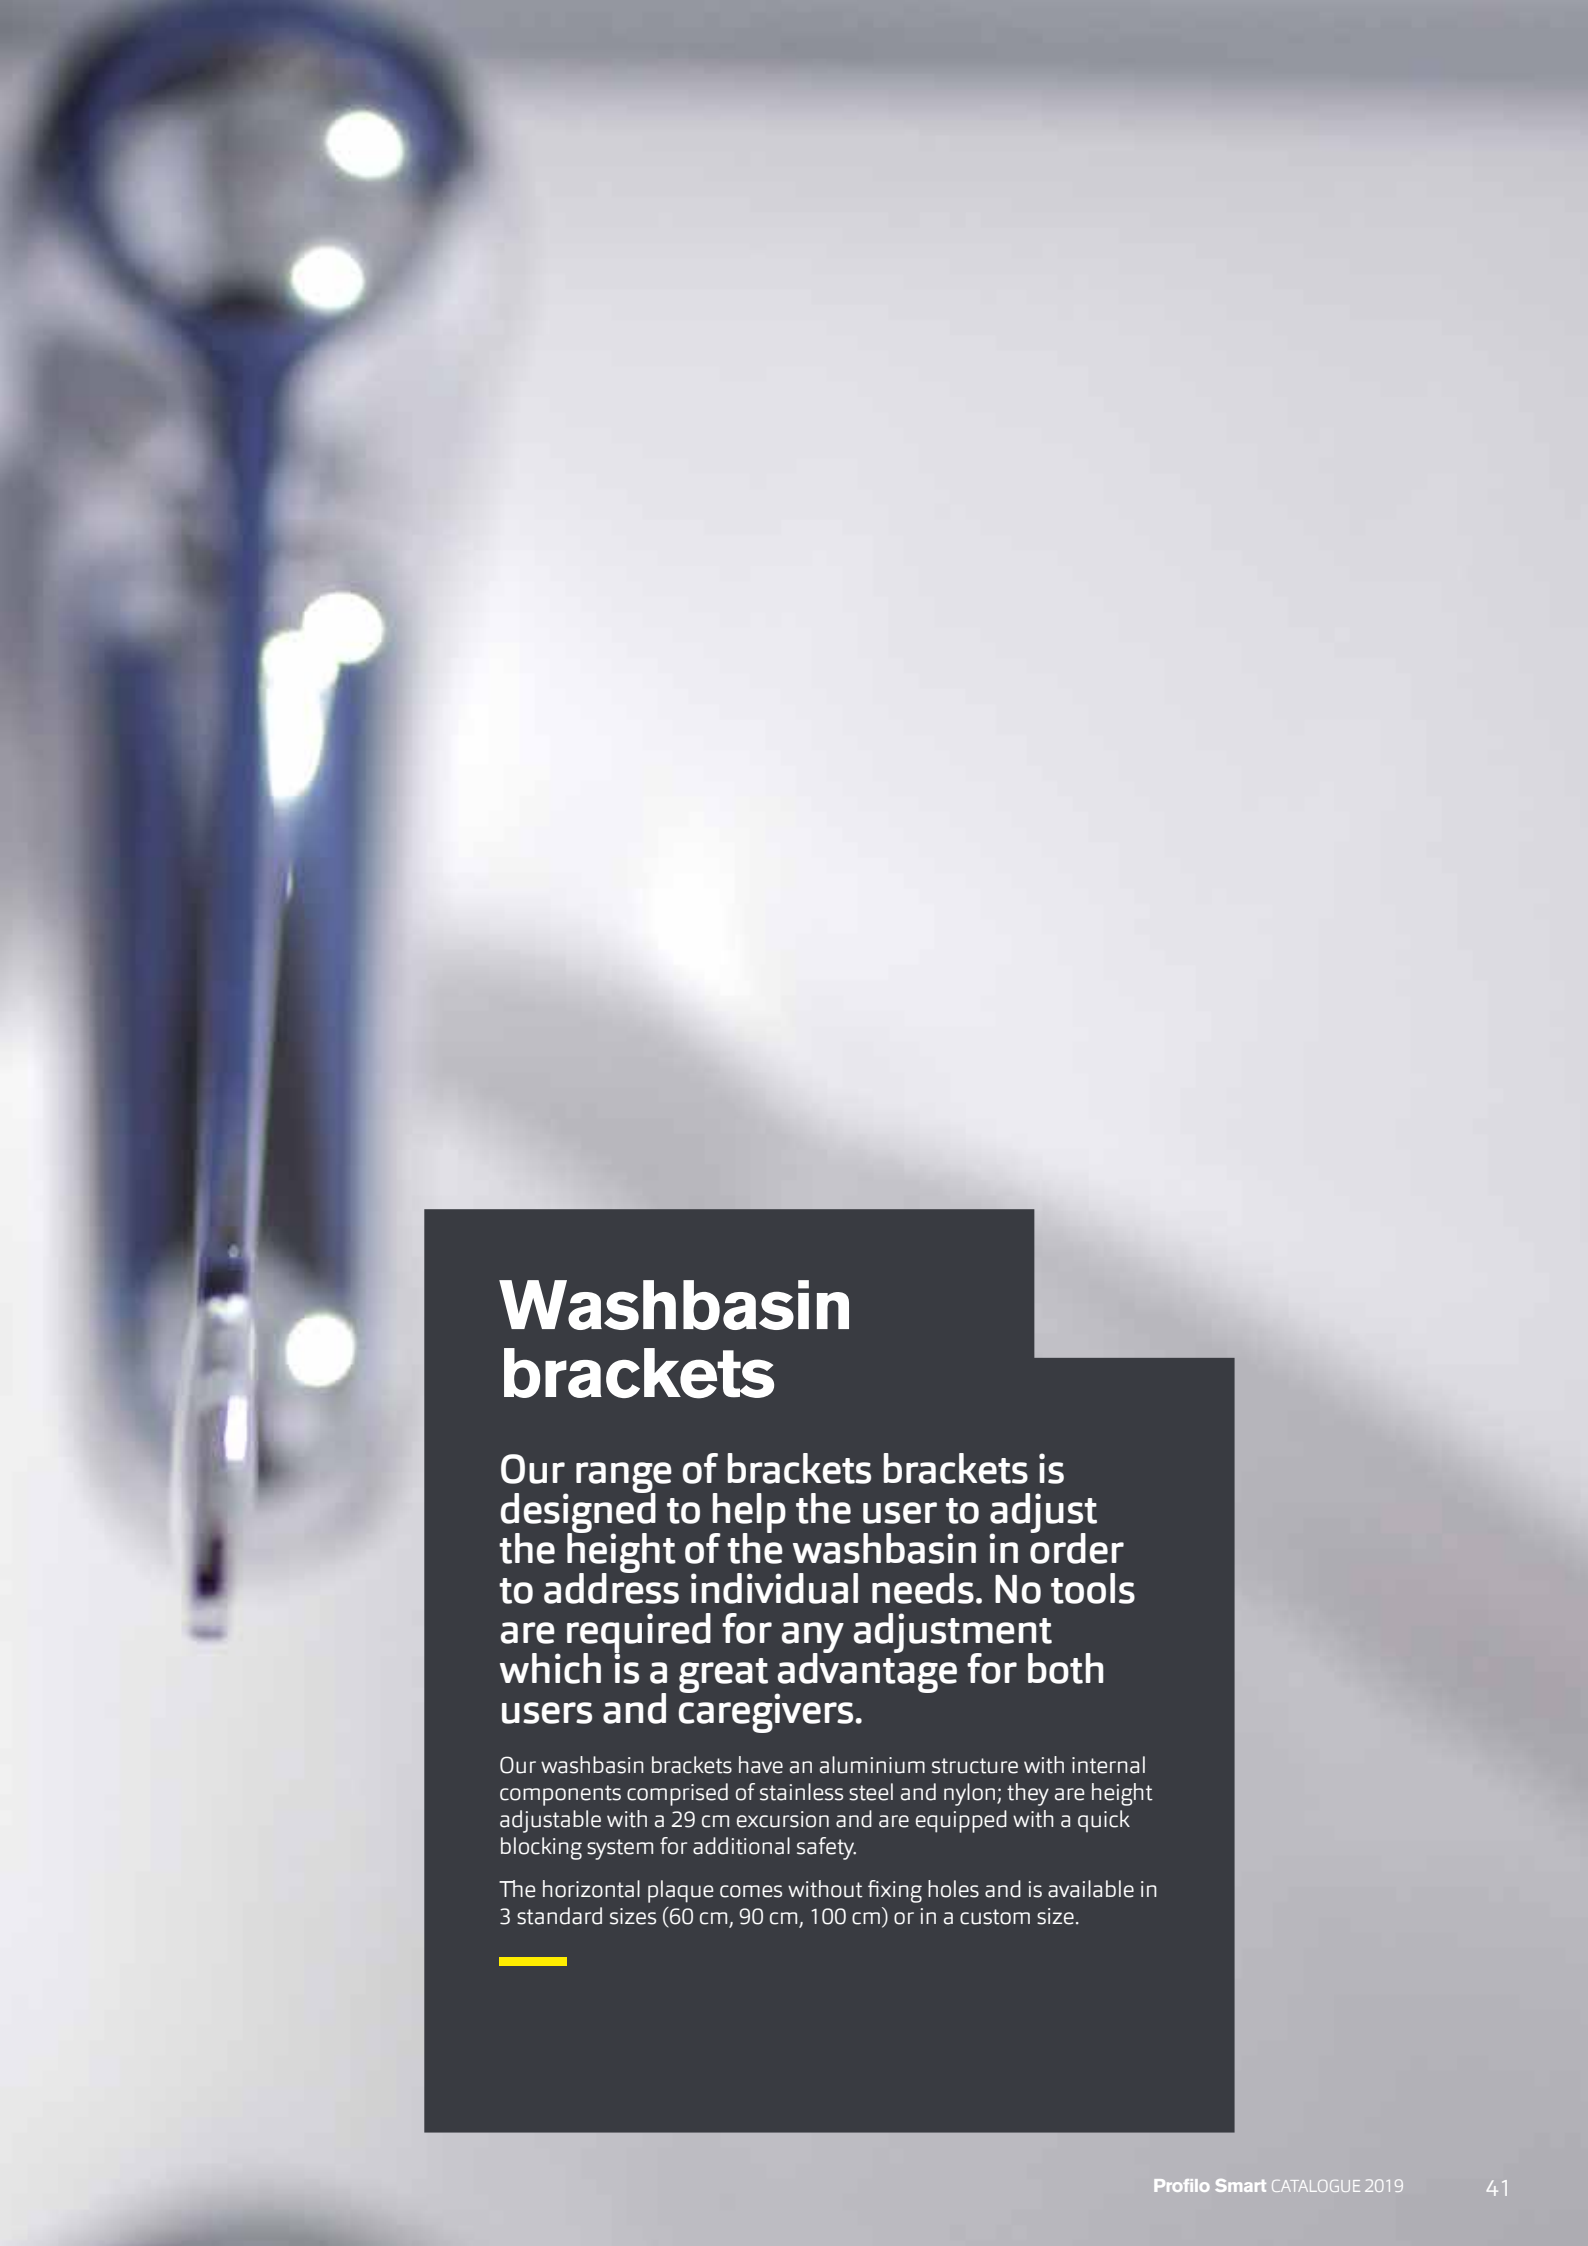
WASHBASIN AREA



Washbasin brackets

Our range of brackets brackets is designed to help the user to adjust the height of the washbasin in order to address individual needs. No tools are required for any adjustment which is a great advantage for both users and caregivers.

Our washbasin brackets have an aluminium structure with internal components comprised of stainless steel and nylon; they are height adjustable with a 29 cm excursion and are equipped with a quick blocking system for additional safety.

The horizontal plaque comes without fixing holes and is available in 3 standard sizes (60 cm, 90 cm, 100 cm) or in a custom size.

Wall mounted washbasin bracket
height adjustable

The washbasin bracket is essential for tailoring the height of a washbasin to the needs of different users. The height of this bracket is manually adjustable and does not require any tools: a great advantage for caregivers. It is available with an anodized or similar stainless steel.

Washbasins

Our range of ergonomic washbasins in white Solid Surface is designed to be fixed on the special adjustable bracket or to be wall mounted. It is the ideal solution for addressing the needs of wheelchair users. The ergonomic washbasins have a slim and light structure, the lack of seams and cracks of the Solid Surface inhibits the growth of germs and bacteria, all of which make the product even more durable. It is non-porous, hence stain resistant and extremely easy to clean.

Ergonomic washbasin, 60 cm – Solid surface

On the frontal side of this ergonomic washbasin, an embedded grab bar helps the user to reach the area without effort and a small water collector has been designed to avoid water spillage during shaving or brushing of teeth.
Available in 2 models, with or without overflow hole.
